Benefits of System Integration

System integration is an effective way to increase return on your supply chain investment. Automation replaces manual processes and order visibility assists planning.

UTS supports all methods of integrating business systems. Our capabilities include EDI transactions, FTP and XML transfers, HTTP and SOAP protocols, and ERP interfaces.

System Integration

Case Study

United States Plastic Corporation

United States Plastic Corporation asked UTS for an integration solution to remove inefficiencies from its order process. Working closely with this client, UTS implemented a solution that:

- Embeds rate estimate, shipment submission, and automated shipment status tools into U.S. Plastic's order management applications.
- Uses the order ID number to autofill the shipment record with shipper, consignee, and product information.
- Writes pricing information and service updates to the client's system.

System Integration

Case Study

EcoSMART Technologies

EcoSMART asked UTS for an integration solution to facilitate strong sales growth without increasing supply chain workload.

UTS integrated order visibility across EcoSMART's supply chain. This visibility allows UTS to manage offsite inventory on a JIT basis and hit delivery windows specified by EcoSMART's customers.

UTS automatically updates EcoSMART's order management applications with shipment information and status updates.

“This solution helps us manage our busy season with better accuracy and fewer headaches,” said EcoSMART CEO Vern Kennedy.
