### Carrier Alerts

Carrier alerts help you understand your options and select the carrier that best meets your needs.

★ Best Value Carrier

Highlights the top carrier when you use our Best Value Carrier

★ Preferred Carrier

Highlights the top carrier when a different ranking method is used.

🕒 Guaranteed Before 12:00 PM

Indicates when the rate includes a guaranteed delivery time.

### Easy to Compare Rates

We show you each carrier's net charge including fuel and any applicable accessorial.

ⓘ Min Density Charge

### Carrier Density Rules

A unique service we offer is the application of carrier density rules. A special rate alert notifies you when a carrier's minimum density rules affect the rate you see.

This cost management service helps you make an informed decision on the front end rather than get surprised by an unexpected upcharge on the back end.

### Predictive Analytics

OnTime percentage reports how consistently each carrier fulfills its published transit time on your shipping lane.

It is a guideline for predicting the reliability of each carrier on a specific shipment.

We calculate OnTime percentage using actual transit times on shipments we've managed over the last 30 days. We've found that our calculation provides a more accurate and responsive guideline than the statistics that carriers report themselves.
