Ranked Carrier at the Top

The #1 carrier by your ranking methodology is featured at the top of the screen.

Add Cargo Insurance

Click to instantly insure freight beyond the carrier's liability limit.

Carrier Risk Management

UTS only shows carriers with valid DoT authority, satisfactory safety rating, and ample insurance.

Guaranteed Service Options

A blue button calls out selections that include a guarantee on the time of delivery.

Easy to Compare Rates

The carrier list is sorted by net charge, which includes fuel and accessorials.

Carrier Density Rules

A differentiator we offer is the application of carrier density rules. A special alert notifies you when a carrier's density price applies.

This cost management service helps you make an informed decision on the front end rather than get surprised by an unexpected upcharge on the back end.

Predictive Analytics

OnTime percentage is a guideline for predicting carrier reliability on a specific shipment.

We calculate OnTime percentage using actual transit times on shipments we've managed over the last 90 days. We've found that our calculation provides a more accurate and responsive guideline than the statistics that carriers report themselves.

Projected Days shows you how long each carrier is currently taking to deliver the shipment you entered.
